Add/Modify Inventory Items in a Recipe

In this window you set how an ingredient goes into the recipe of an item: whether the customer can remove it, in which orders it is used and in what quantity.

How to get here: Add or **Modify** button on the Recipe of Sale Items screen.

Ingredient Type

Type	What it means	Example

Selectable Ingredient	The customer can remove it when ordering the item. Its price can be deducted, as set in the inventory items of the family group.	The bacon of a barbecue pizza
Mandatory Ingredient	It cannot be changed or removed.	The pizza dough, the box of delivery pizzas

Validity scope

It sets in which orders the ingredient is used: **ALL**, or only some of **Dine-in**, **Delivery**, **Pick-up**, **Take-away**, **Catering** and **Employee**.

It can only be chosen for mandatory ingredients; for selectable ones it is not possible to distinguish by order type.

> **Example.** For the pizza box, the scope would be Delivery, Pick-up and Take-away. For the pizza wedges, Dine-in.

Quantity and Yield

- **Quantity**: the quantity of product used when preparing the item, in units of use.
- **Yield**: the percentage of the ingredient that is actually used. In the vast majority of cases it is `100`.

> **Yield example.** If only 70 % of 1 kg of chicken is used, because 30 % is waste, the yield is `70`.

Buttons

- **Ok**: saves the ingredient in the recipe.
- **Cancel**: closes the window without making any changes.
