

# Inventory Items Location

Once we have clicked on the Menu option **Data->Items->Inventory Items Location**, a screen like the one we can see below will appear:

| ID | Location |
|----|----------|
|    |          |

Buttons: Add, Modify, Delete, Cancel

From this screen, we will see all the locations where the inventory items can be stored which already exist, and they will appear in the **Inventories**.

We will use the inventory items locations, to insert them when appropriate through the **Choose location** screen.

We have three buttons with different functions:

**Add:** We will insert a new location where the inventory item can be stored. If we click on this button, we will create a new line in the list, where we have to enter the code and the name of the location and press Enter.

**Modify:** It allow us to modify the name or code of a previously selected location.

**Delete:** It allows us to delete a previously selected location.
