

Locations for Items

Once we have clicked on the **Locations** button through the **Inventory Items** screen or through the **Add/Modify Inventory Items** screen, a screen like the one we can see below will appear.

From this screen, we can indicate in which location are stored the inventory items, and it will appear in the **Inventories**.

We can **Add** and Delete Locations where the inventory item is stored.

The **Cancel** button allows us to exit of the screen without making any changes.
