Repair Installation

This option downloads again the PizzaGest files that are missing on the computer: the translations, the printing service, the fingerprint program and the **Repair Database** and **Technical Support** tools.

How to get here: menu **Help → Repair Installation**.

> The option only appears on server number 1 of the branch (or on franchisee station number 1).

Repairing the installation

1. Click the option. The keyboard appears with the title **Password for deep repair**.
2. Confirm the keyboard, with or without a password.
3. Wait for the downloads to finish.
4. When it finishes, the message "Installation repaired successfully." appears.

If you cancel the keyboard, nothing is done.

Basic repair and deep repair

- **Basic repair**: the one carried out if you do not type the password or it is not correct. In that case the warning "The password is not valid. A basic repair of PizzaGest will be carried out" appears first. It downloads only the files that are not in the PizzaGest folder.
- **Deep repair**: carried out with the correct password. It downloads all the files again, even if they already exist.

In both cases the translations of the program are downloaded again.

> If the printing service or the fingerprint program has to be downloaded, PizzaGest closes them first. The Printing Service opens again by itself when the download finishes.
